                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBCELLULAR LOCATION: Chloroplast (By similarity).

TISSUE SPECIFICITY: LEAVES AND SEEDS.

DEVELOPMENTAL STAGE: IT IS PRESENT IN YOUNG COTYLEDONS AT 14 DAYS AFFER FERTILIZATION (DAF) WHEN CELLS ARE STILL RAPIDLY DIVIDING.

AFFER FERTILIZATION (DAF) WHEN CELLS ARE STILL RAPIDLY DIVIDING.

LEVELS STEADILY ACCUMULATE UNTIL THE END OF THE CELL EXPANSION PHASE (35-40 DAF) AND WITH THE BECINNING OF THE SEEDS DESICCATION PHASE (35-40 DAF) AND WITH THE BECINNING OF THE SEEDS DESICCATION PHASE AT 50 DAF, THE LEVELS DECREASE TO VERY LOW LEVELS.

SIMILARITY: BELONGS TO THE BACTERIAL AND PLANTS GLUCOSE-1-
PHOSPHATE ADENYLYLTERANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diphosphate + ADP-glucose.

"Isolation, characterization, molecular gene cloning, and sequencing
of a novel phytase from Bacillus subtilis.";

Appl. Environ. Microbiol. 64:2079-2085(1998).

-i- FUNCTION: CATALYZES THE HYDROLYSIS OF INORGANIC ORTHOPHOSPHATE
FROM PHYTATE. ONLY PHYTATE, ADP, AND ATP WERE HYDROLYZED (100, 75,
AND 50% OF THE RELATIVE ACTIVITY, RESPECTIVELY). HAS MAXIMAL
ACTIVITY AT PH 7 AND 55 DEGREES CELSIUS.

-i- CATALYTIC ACTIVITY: Myo-inositol hexakisphosphate.

-i- CATALYTIC ACTIVITY: Myo-inositol hexakisphosphate.

-i- COPACTOR: ISOLATED ENZYME REQUIRED CALCIUM FOR ITS ACTIVITY AND/OR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bacillus subtilis.
